THE MOST IMPORTANT PIECE OF EQUIPMENT IS THE ONE YOU HIT

Hybrid – Authentic feather feel, great performance and lasting durability.

RSL Hybrid 5 is a hybrid shuttlecock featuring 15 medium-grade natural feathers combined with a connector. This innovative construction is designed to deliver the feel and playing characteristics of a traditional feather shuttlecock while offering improved durability.

The natural feathers provide excellent feel and consistent spin in the air, delivering a more authentic playing experience and better shot control compared to fully synthetic shuttlecocks.

The connector helps absorb impact upon contact, reducing stress on the individual feathers and minimising the risk of feather breakage during play.
The perfect blend of natural feather feel and enhanced durability.
Authentic feather performance with improved durability and designed to last longer.

With a strong focus on durability, precision, and performance, RSL shuttlecocks are the preferred choice for players and clubs around the world.

When you choose RSL, you choose the best playing experience on court – and quality above all.
